

Wrap-around Vertical Fins Carry Accents to New Heights At Office Complex

Verticals by Weiss enhance the entrance, accent sloped walls and extend from the base past the top of the structure

Long spans of virtually seamless stainless steel presented a unique challenge to Weiss Sheet Metal. The lower edge of these fins turned inward 90° and widened, but were meant to look like they had been crafted from a single sheet of metal. They were actually fully welded and finely ground and polished for the finished effect of seamless stainless.

The sloping fins add an attractive finish to the glazing and contrast beautifully with the tint of the glass here at 40 Lansdown Street.

Architect:
Elkus/Manfredi Architects, Ltd.
Product:
Stainless Steel Trim

Contractor
Walsh Bros. Construction
Customer
Ipswich Glass
Location
Cambridge, MA
